Overview

MyCTCare app is a branded app for Atlascopco (CT division) developed by Selfservit Solutions Pvt Ltd.

The app enables field service engineers to access the more info to perform their duties better viz, Knowledge base (Technical Document search and view), CallDB (Expert Chat and record), Machine History, Stock Enquiry. Now this will be a separate app for Engineers, eventually there will be only one app for Engineers.

MyCTCare in detail

Field service engineers, when they go for service to customer sites, face the following challenging scenarios:

- Forgot some of the procedures
- Have to service non-familiar machines/methods
- Not aware of some aspects of service
- Not aware of the recent changes or old machine's drawings
- Not trained in some aspects of the machines
- Not familiar with business partner/3rd party machines

My CT Care addresses above challenges by providing access to technical documents from the mobile of the Engineers.

Knowledge base is search and view of any of the following:

Technical manuals, Technical Documents, Demo videos, How-to do documents, Technical drawings, Engineering change bulletin etc..

Technical documents are stored using familiar **Tags** and when the engineer searches those tags; they will be able to access the wealth of technical information relevant for the engineer at any required time

CallDB

2nd Tab in the app - CallDB provides chat interface to respective **Product Specialists**, so that if the technical query is not available in knowledge-base, the engineer can interact with product specialist to quickly clarify the technical doubts and proceed with required service promptly.

Machine History

Any touch-point and report generated during the touch point is available in time-line chart

Stock Enquiry

Dealer engineer when on-site or when traveling, can have a quick look at the spare available at his dealer's Warehouse giving a part number.

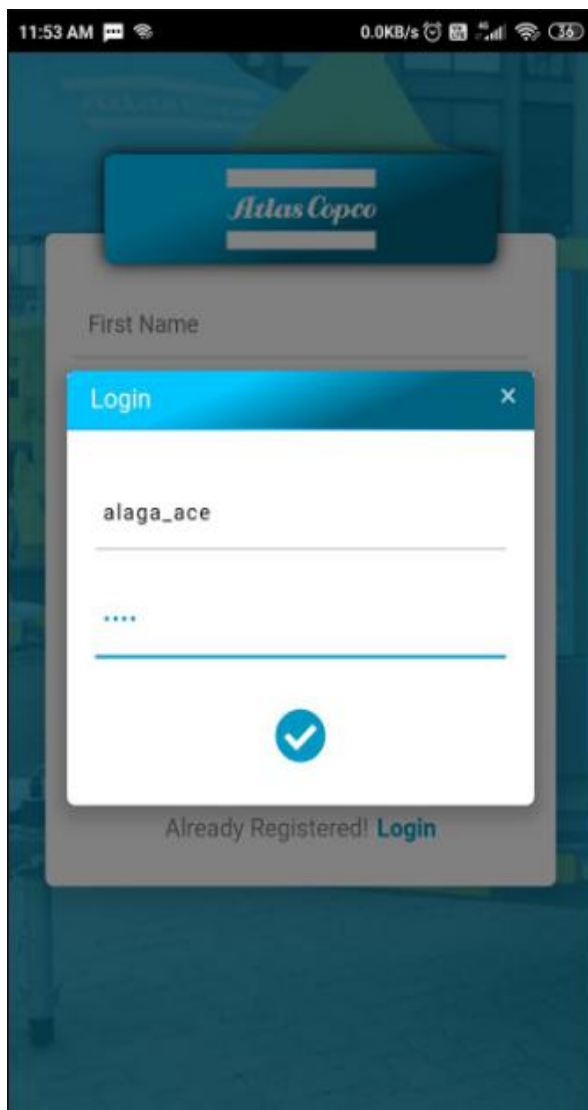

Download & User Login procedure

Users can download MyCTcare from Android Playstore (iOS is yet to be certified)

(Earlier app MyDealerquest, if available in mobile, can be uninstalled and folder removed to save space but not mandatory)

Existing MService User:

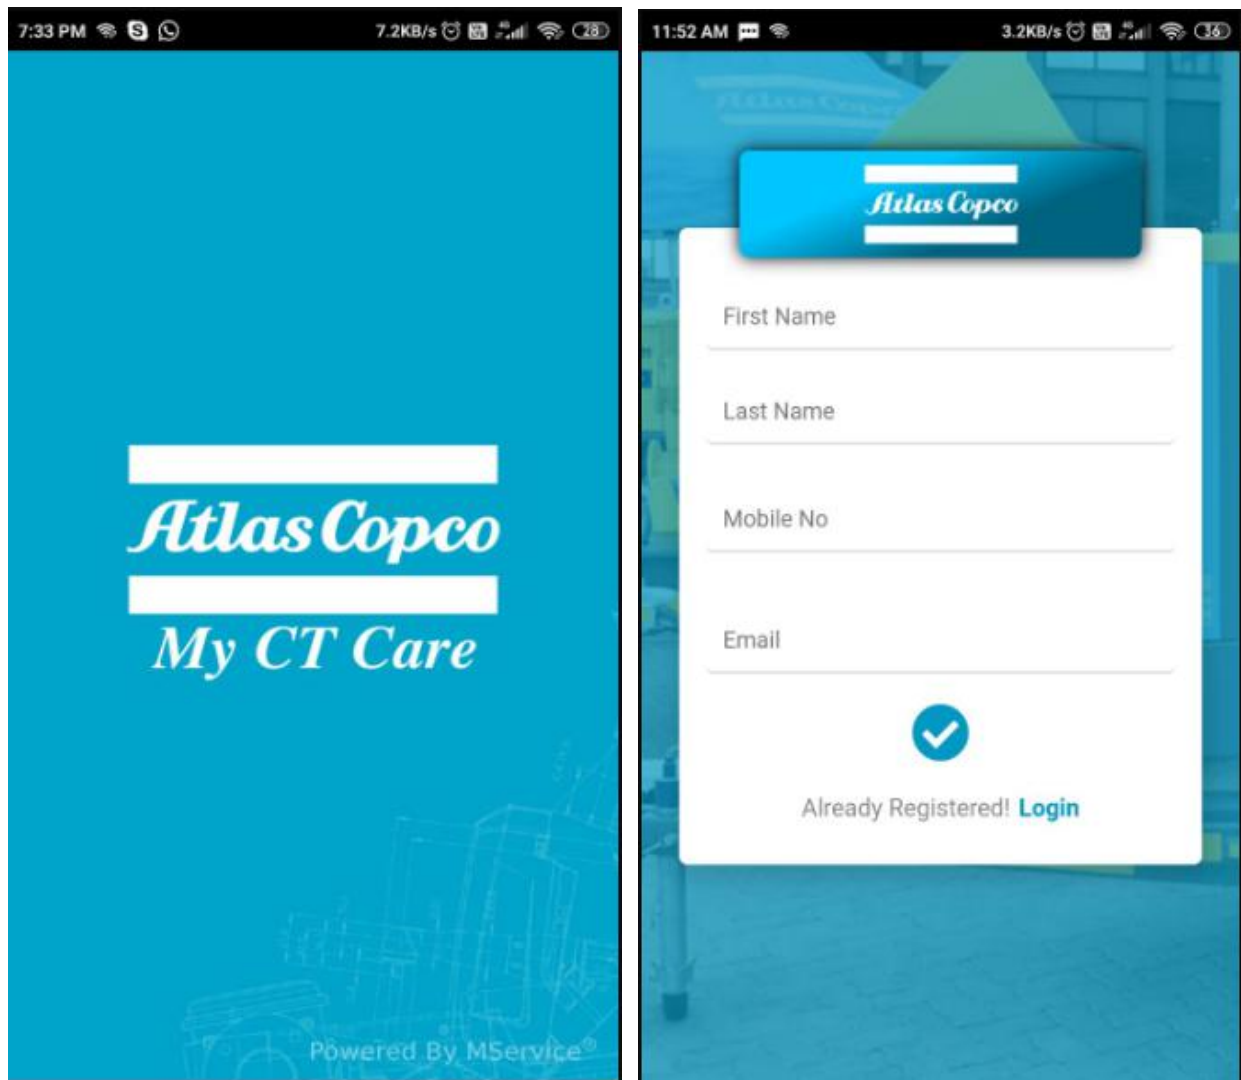

Any user already having MService login credentials (Mobile or Web) can login to this app as below:

They can give the existing user name and password and login into the app.

For the first time-MService user

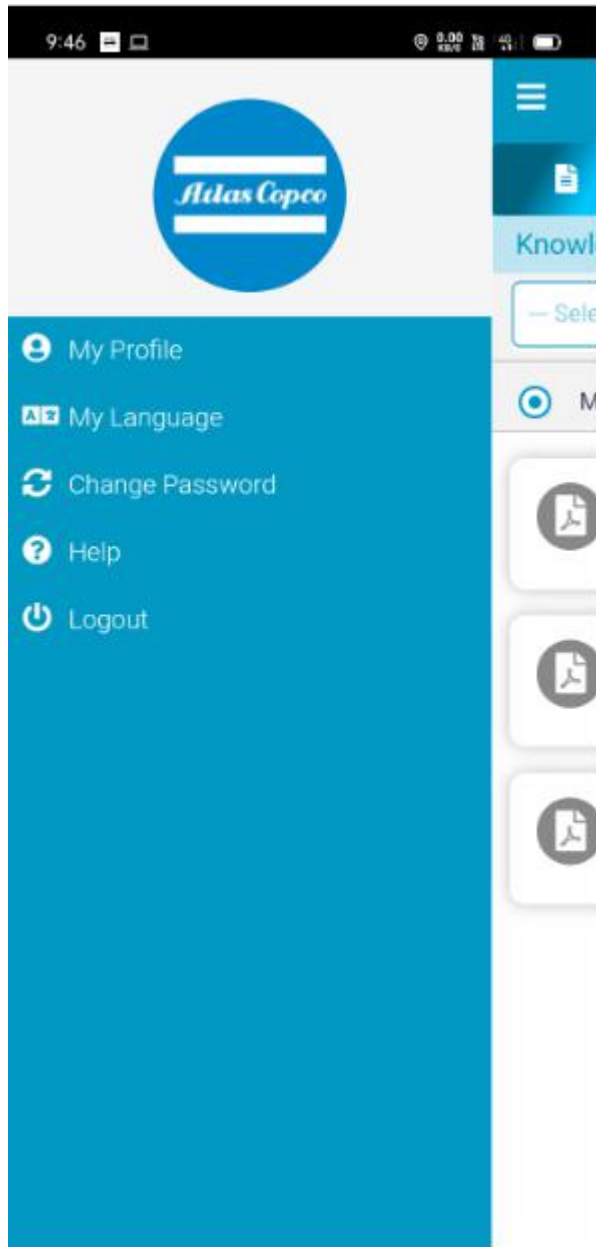

Dealer Service engineer having approved credentials in mobile app can download My Ct Care from play store/i store and use the same credentials to login as below

While logging for First time it will ask to fill the details of User, after these details are entered username, password will be asked to login the App.

User screen options

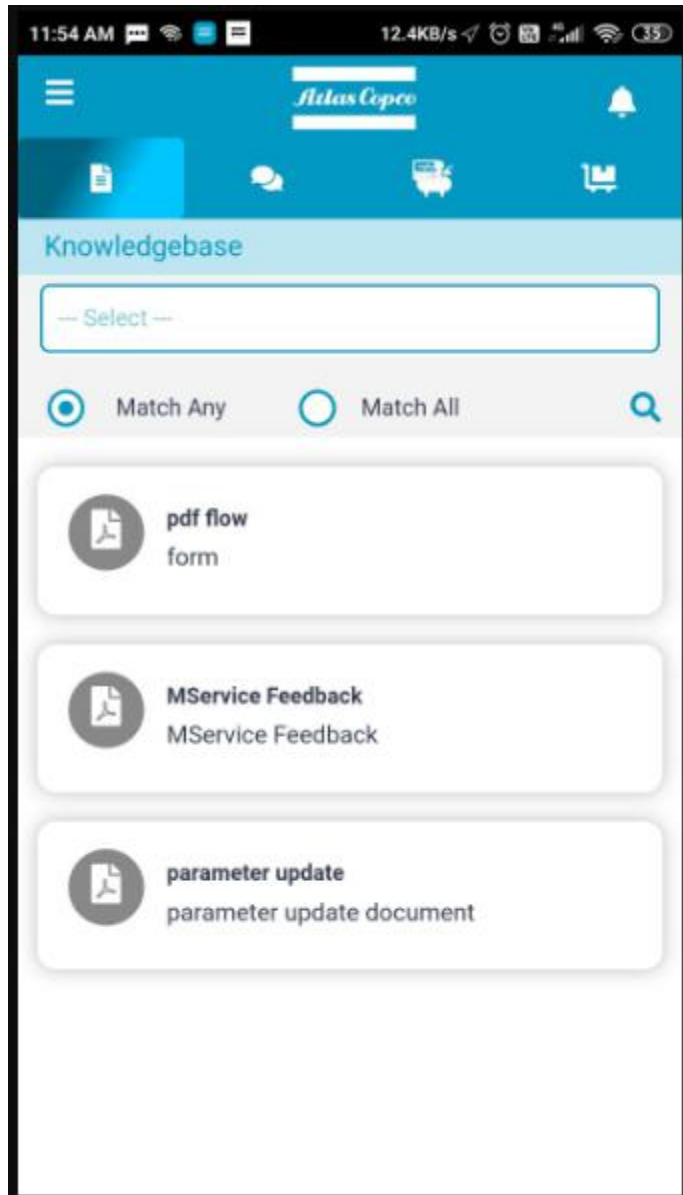

User can maintain My Profile, My Language, Change Password, Help and Log out options

Knowledge Base search screen

In the knowledgebase screen, users can search for required Tags.

If more than one tag is given, the user can choose **Match-any** or **Match-All** criteria to fetch the results.

Documents Viewing in Knowledge base

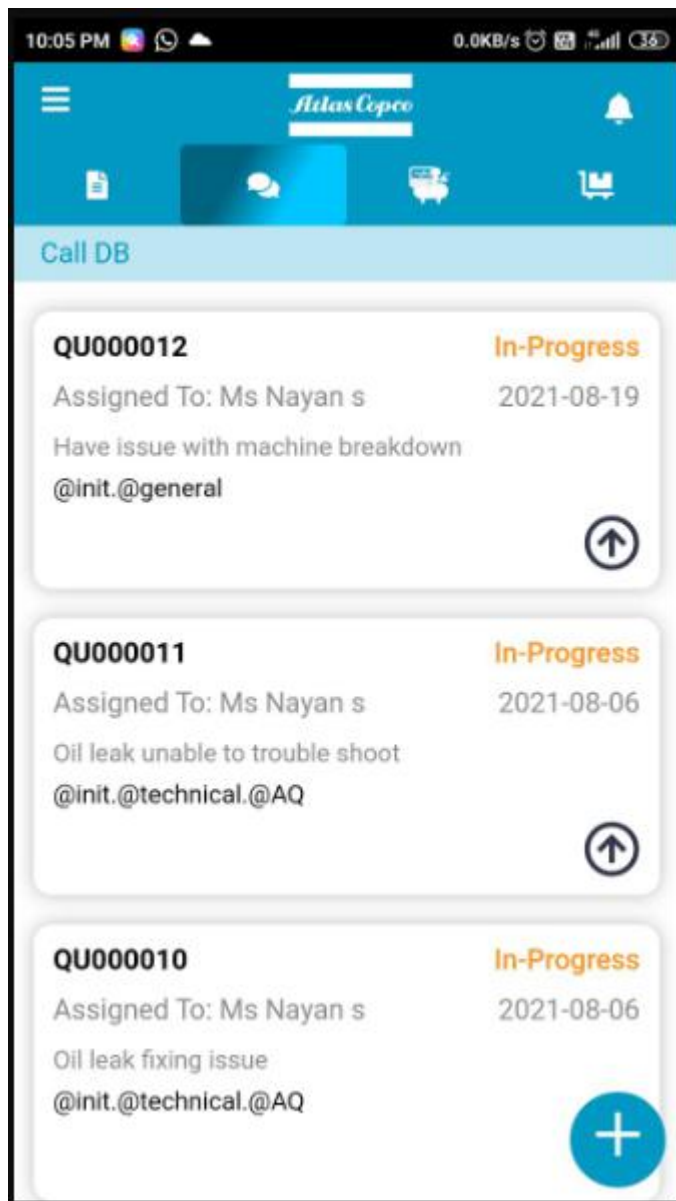

Restriction of Forwarding and Downloading is done. And three Buttons Option (Zoom in/Zoom out) is provided to View the Documents.

Query/Chat Process

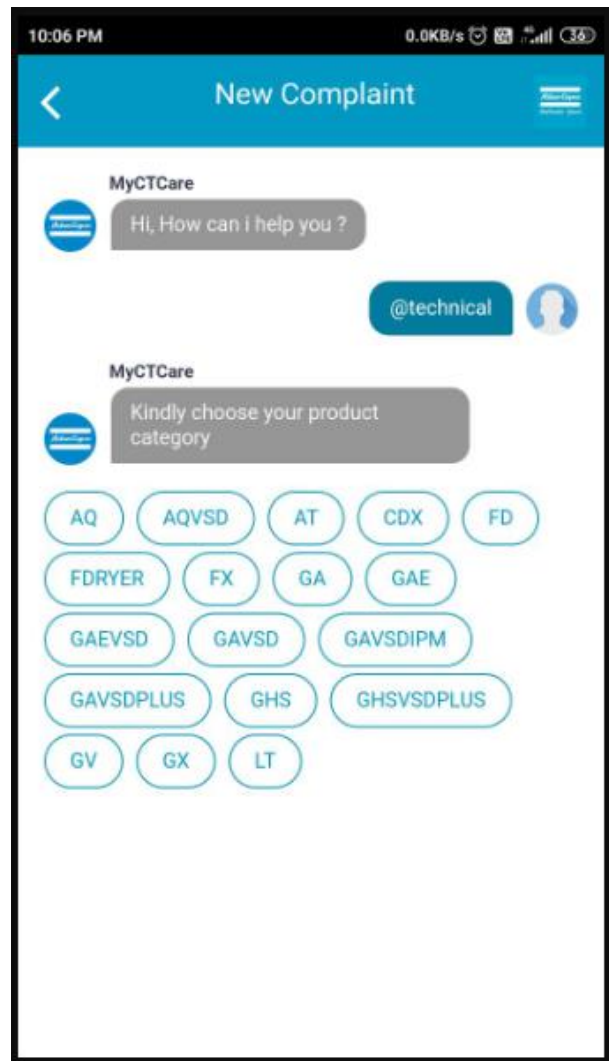

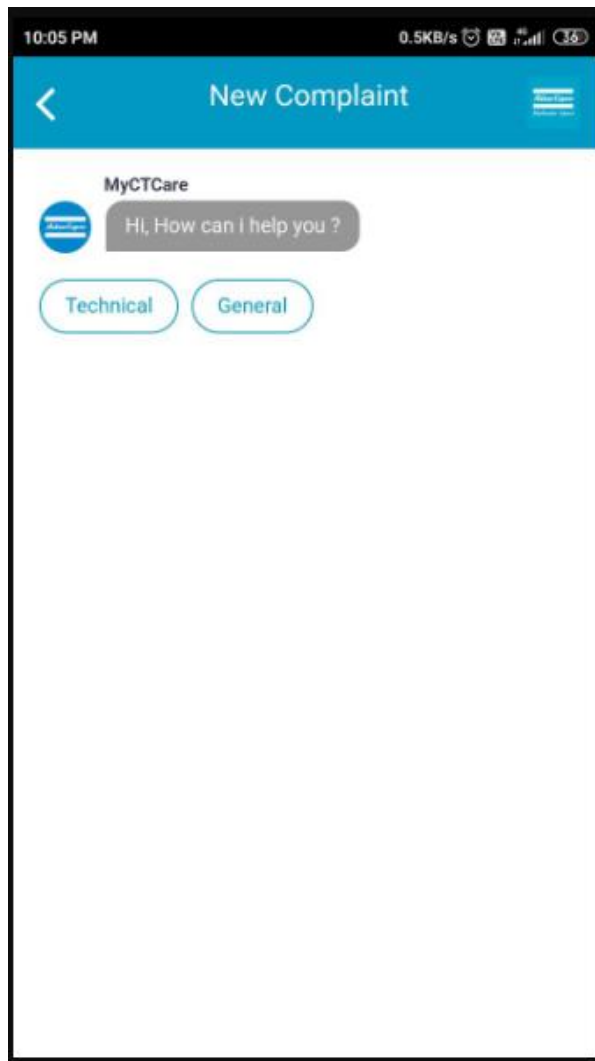

In case the service engineer is having any queries/clarifications/doubts regarding the service, he can seek Product specialist support by generating a query from call DB screen

To create a new query he needs to click on “plus” symbol at the bottom of the call DB screen

While creating a new query engineer needs to select the query type as Technical/General

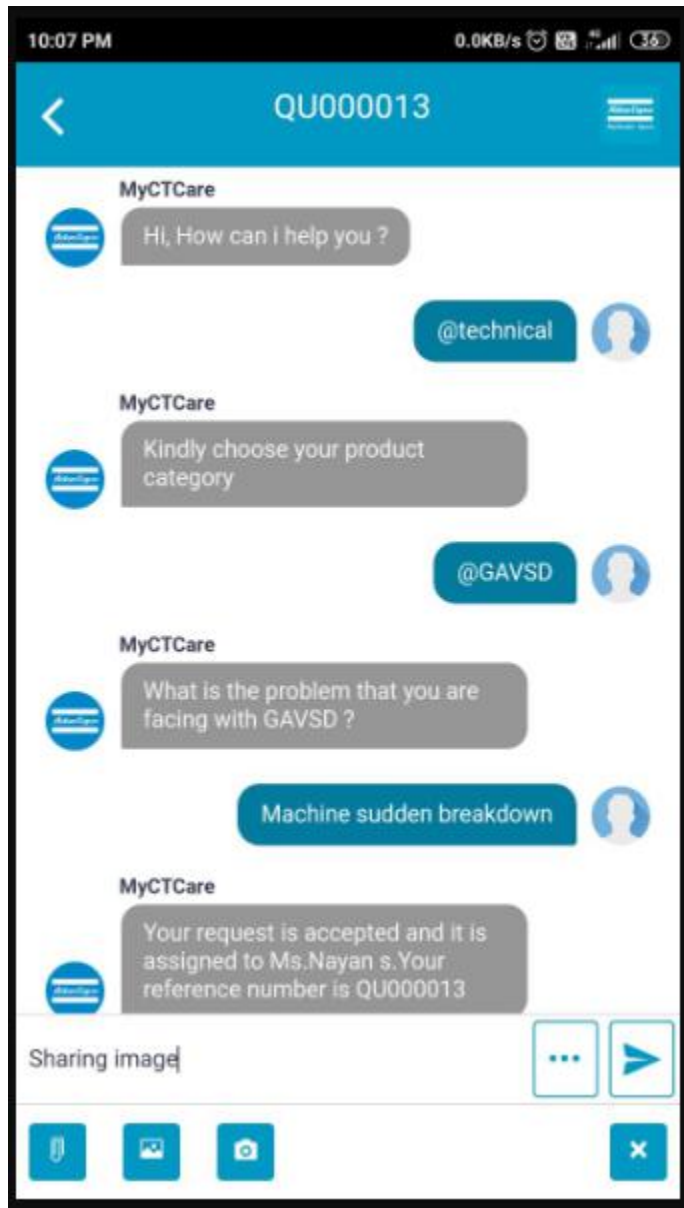

Next, the system will ask automatically to select the **Product category**

The product specialist mapped to this engineer will receive a **notification** on generation of a new query

When product specialist replies to the query from his login, the service engineer will receive a notification in his login

To view the notifications the user has to click on the “bell” icon visible on the top- right corner on the screen

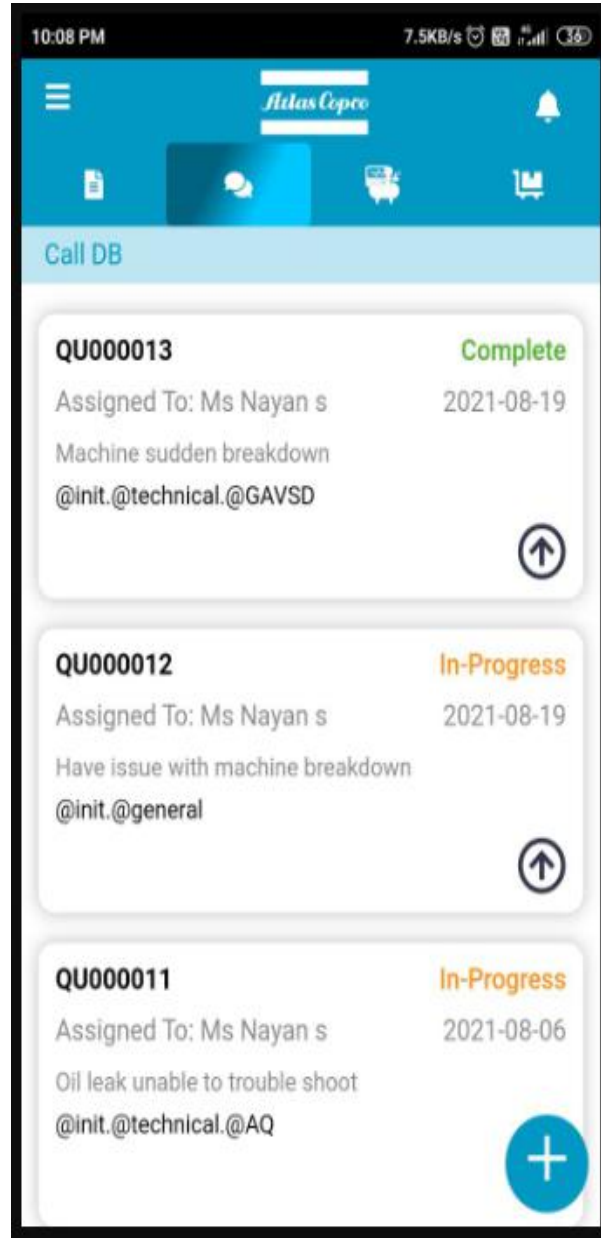

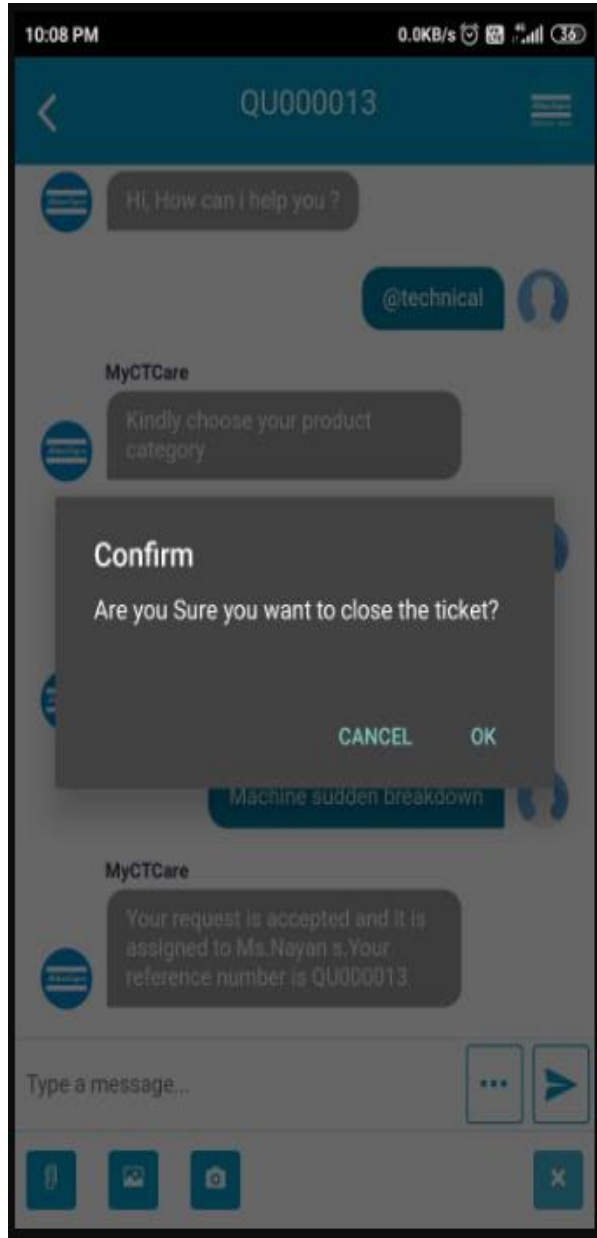

To share any attachment, photograph or live image service engineer can click on the three dots as in the above screen.

If the engineer has got the support he needs in the query, then he can close the query by clicking on the cancel symbol

A confirmation screen opens on clicking cancel. Clicking on “OK” will confirm the closure of the query.

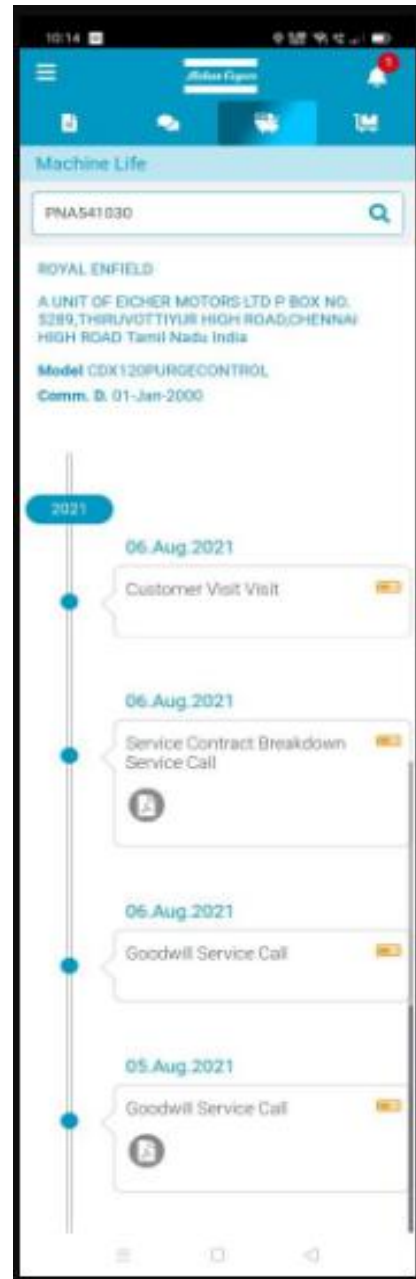

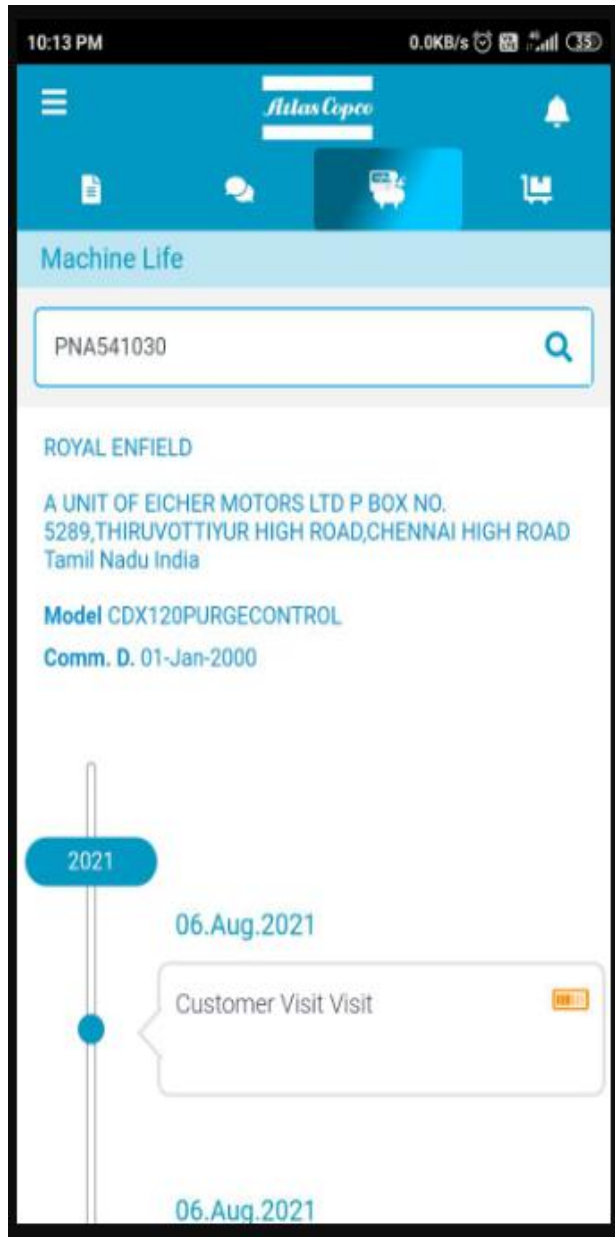

Now the query status will change to “**Complete**”, but will be available for future reference.

Machine Life History search

Any Dealer assets life history search by machine serial no. is available in this screen.

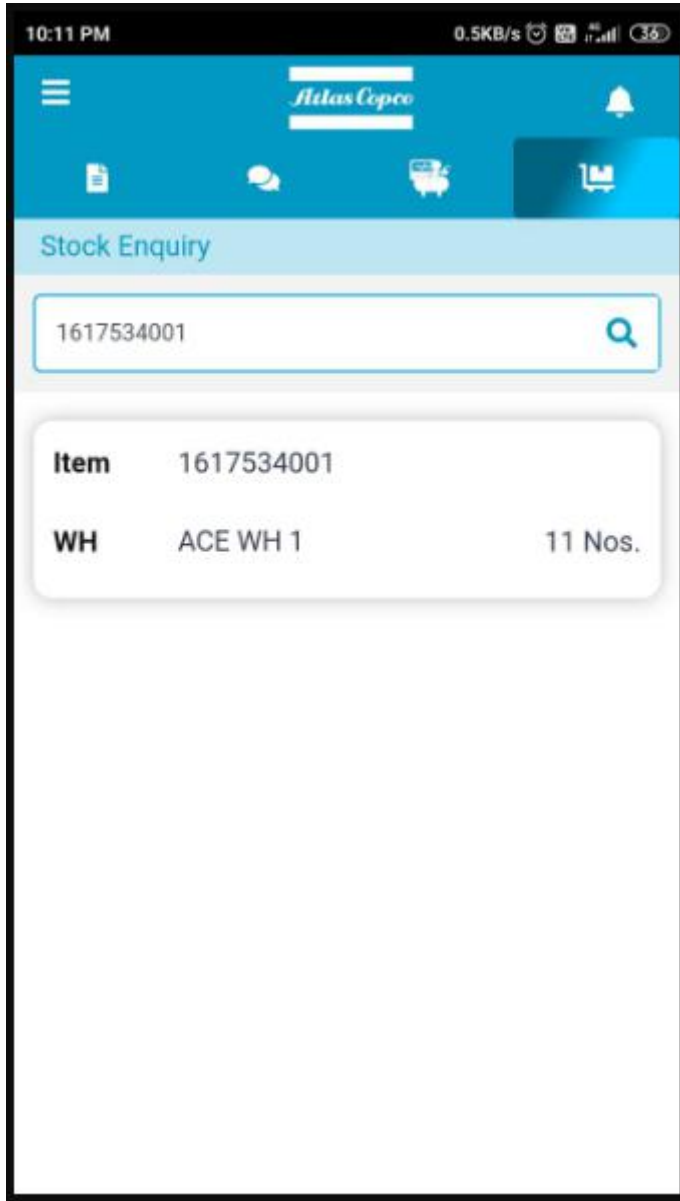

The search will retrieve the customer details, machine model, DOC & the service visit details of the machine

Stock Enquiry Search

The stock enquiry search from the concerned dealer warehouse can be done in this screen with item code.

The search retrieves Dealer warehouse name and item quantity.
