Enquiry Follow up Visit creation.....	23

Overview:

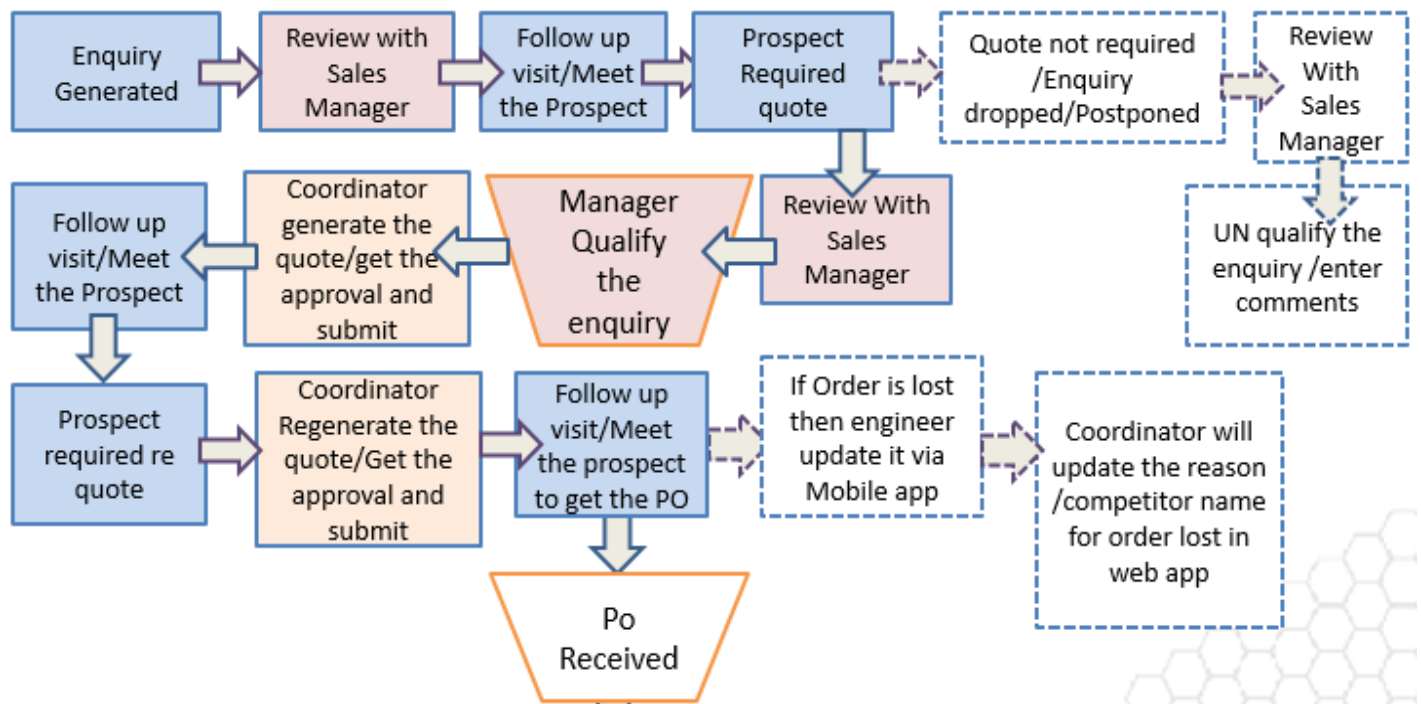

This document explains about various flow of activities carried out by Dealer sales team in PT Equipment Sales and how they activities updated, status tracked by different stake holders.

Work Flow for Equipment Sales:

Sales visit logging to PO Received (For New Customers)

Direct Enquiry logging to PO Received (For Existing Customers)

Creation of Visit call by Dealer Sales/Service Engineer from Power hub app & Auto generation of Enquiry:

Any Mobile user can download Power Hub app from Google Play Store or App store (iOS). After installation of the app, the user needs to share the device id (visible to the bottom of app screen) to OEM Coordinator to enable the access and this device id is unique for individual users. Once access is given fill the details like: Client ID, Country Code, Username and Password and click on register for registration of the app.

For example:

Username: saengg

Password: *****

Note: All entries should be in small case letters without any spaces

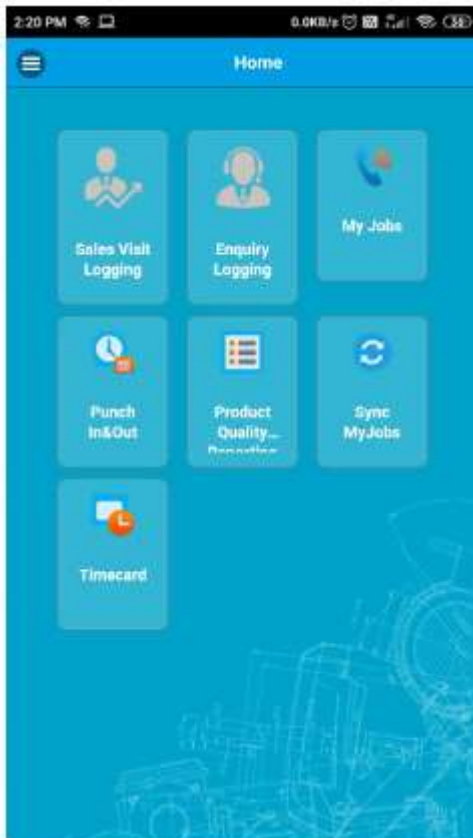

After registration, the dealer Sales engineer can log a Prospect Visit for a new customer from **Sales Visit Logging** or can generate an enquiry directly from **Enquiry Logging** options available on home screen.

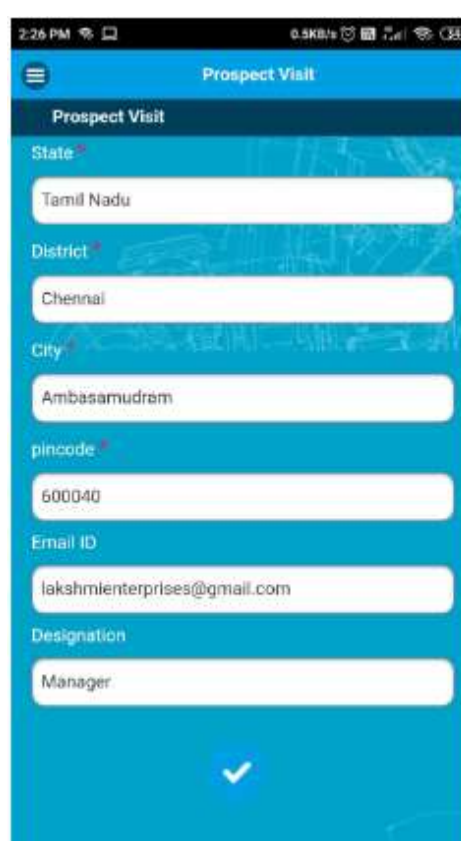

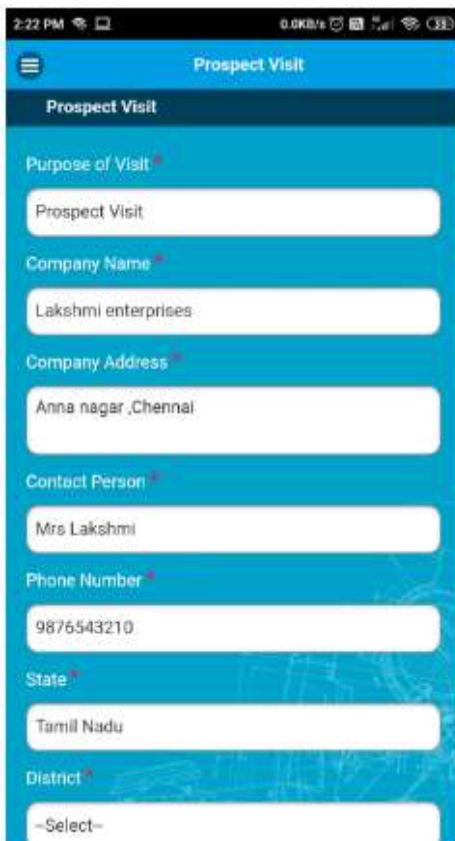

The flow is similar for both Dealer Sales engineer & Dealer Service Engineer for Sales visit Logging & Enquiry generation from power hub app

Simultaneously, any Sales visit or Equipment enquiry logged from Dealer service coordinator or Dealer sales coordinator web login also can also be viewed & processed further from a particular Dealer engineer's login, if it is assigned to that particular engineer.

When clicked on Sales visit logging option ,it asks to select the type of Prospect visit from the list of options available as drop down as shown in below screen ,& need to click on Tick button to continue filling visit details

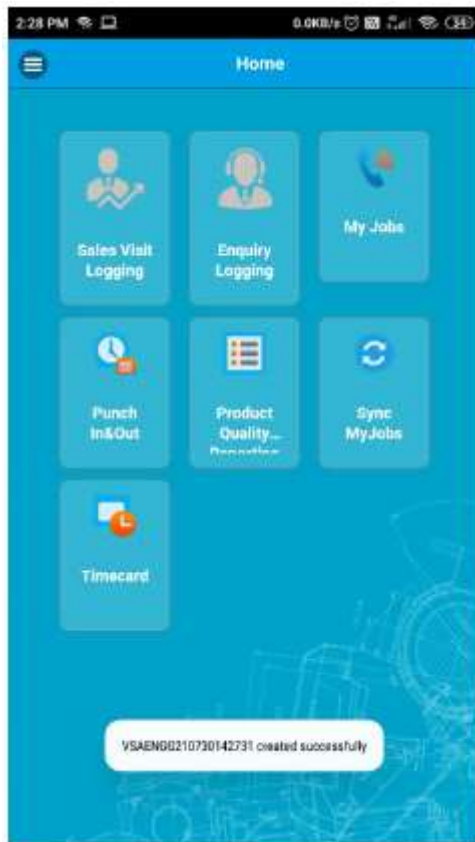

Sales engineer needs to fill up the mandatory fields marked with (*).After filling up all necessary information. Then the sales engineer needs to click on Tick button at end of page & should click on OK to confirm.

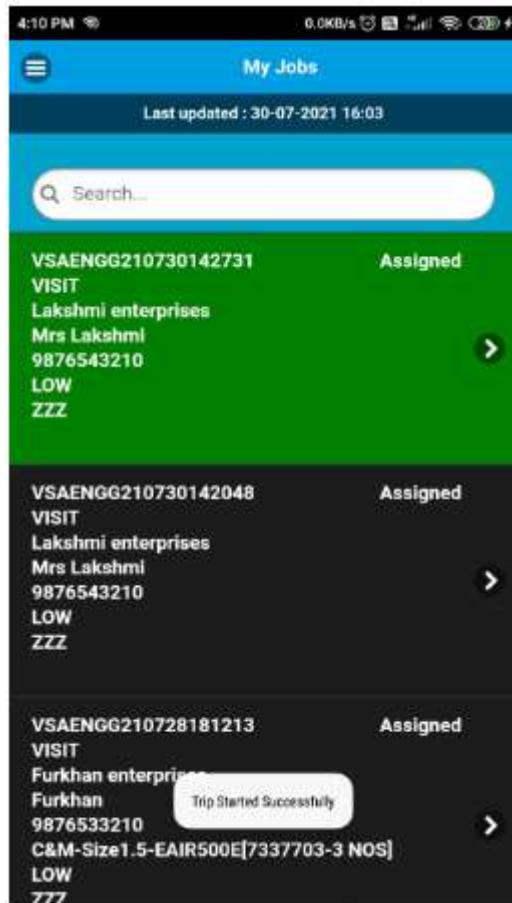

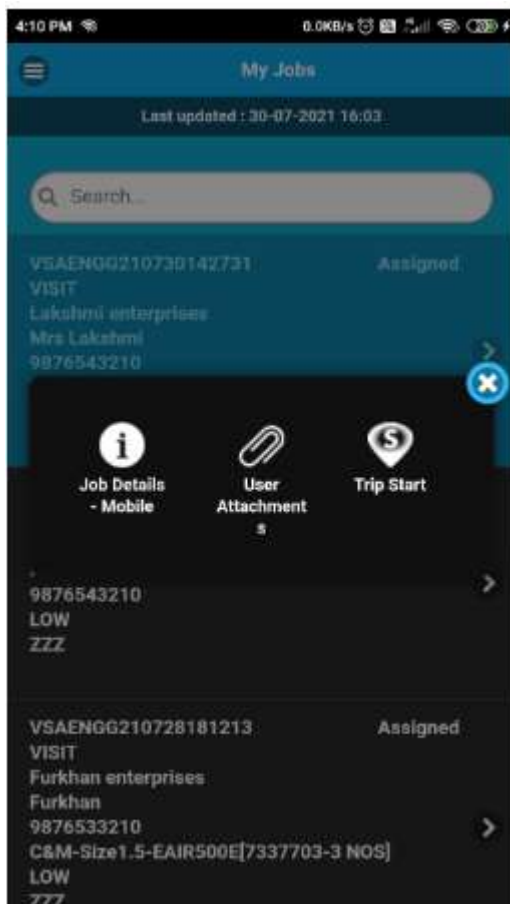

After confirming the submitted details, a Visit number will be generated. The Visit number will start with a prefix **V**. Simultaneously, the system will add this customer info in the data base with a unique customer id & that customer id can

be used for **Direct Enquiry** logging either from Sales /Service engineer's mobile app or from Sales /Service Coordinator's WEB application.

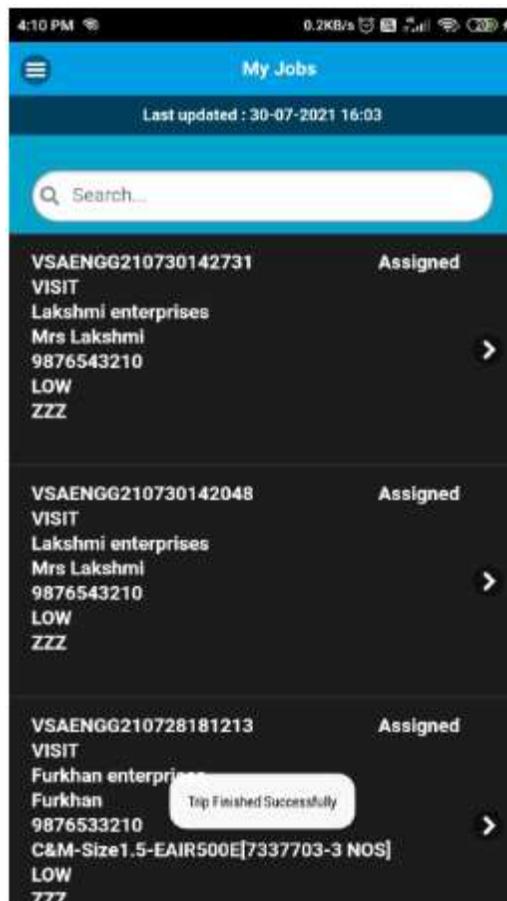

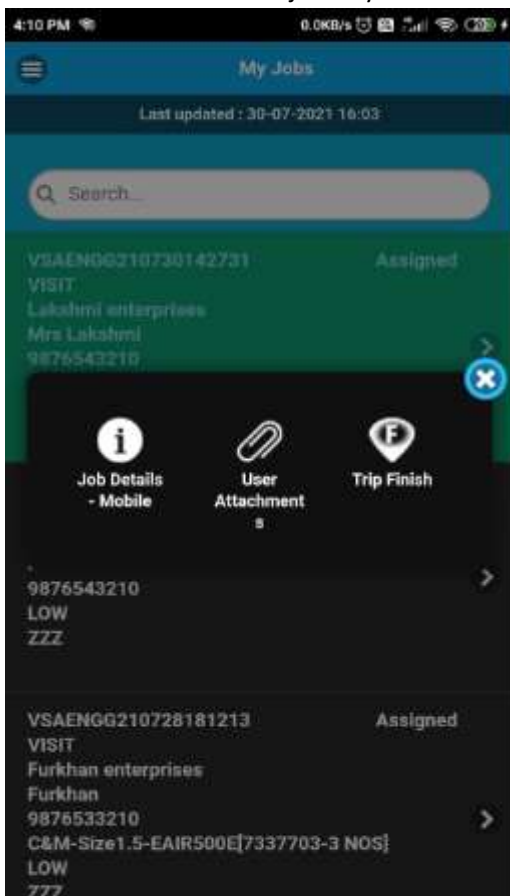

The newly created Visit number will appear under "**My Jobs**". Sales/SE Engineer need to click on **Sync My Jobs** to refresh the calls. The new visit generated will be appearing in "Assigned status" .

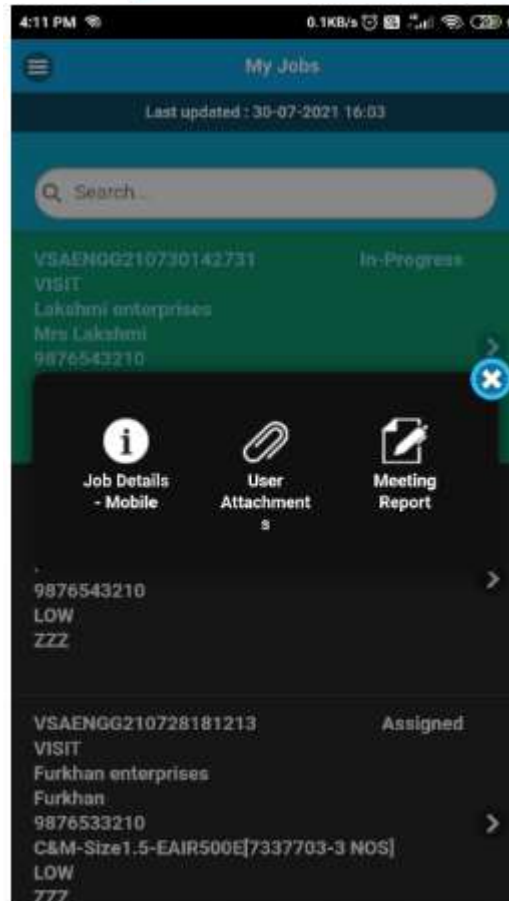

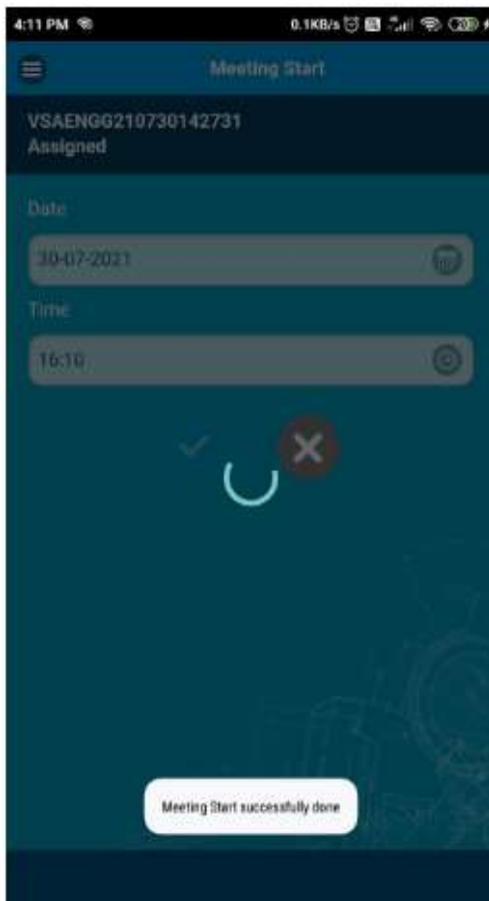

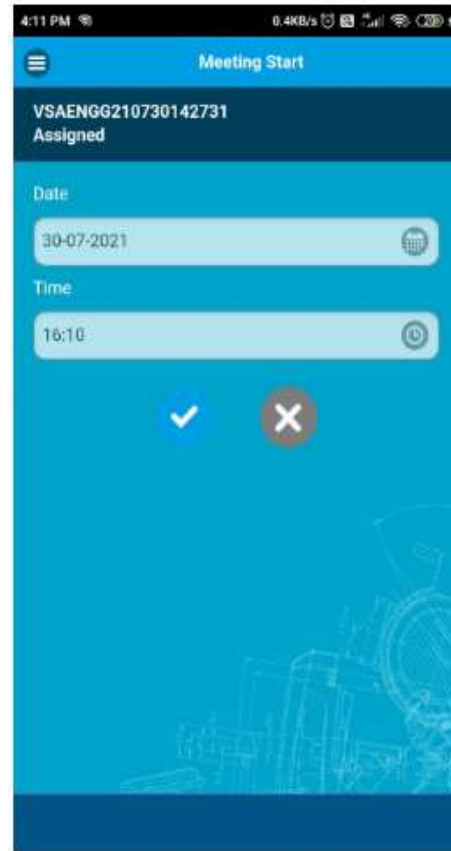

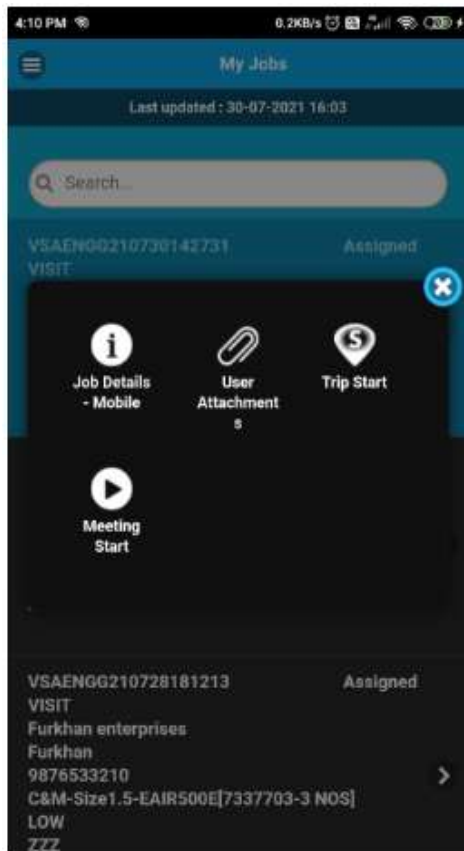

Once the Visit number gets visible in My Jobs, the Sales engineers can do **Trip Start** by clicking on the visit number when he starts his journey to the customer location. **Trip started successfully** msg flashes at bottom of screen. Once the Trip start is done the Visit color automatically changes to "**Green**" indicating that it is the "**ACTIVE CALL**" and it appears at the top of all other calls.

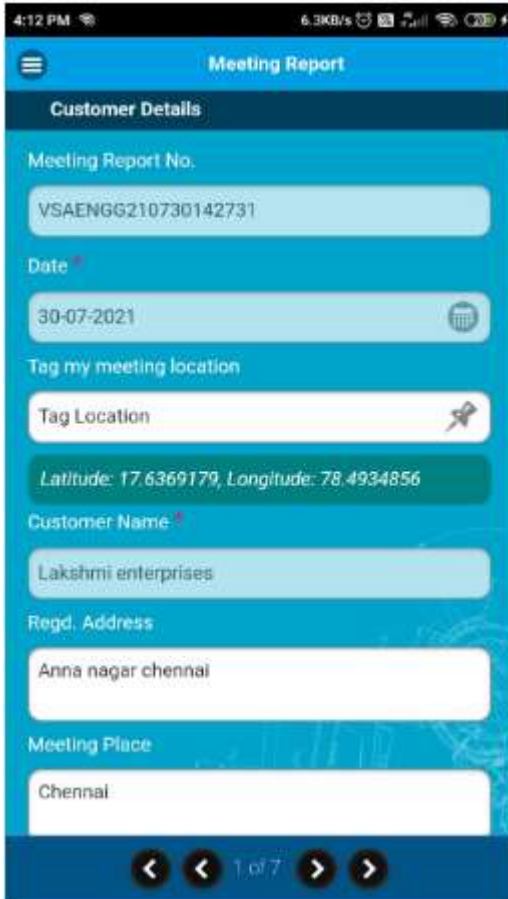

When the Sales engineer reaches the site/Customer location, He can click on the “**Trip Finish**” option. A msg flashes at the bottom of the screen as “**Trip finish Successfully**”. Engineer can do **Trip Start/Finish** multiple times to record their trip details if there is a break journey.

After reaching to the prospect customer, Engineer can do **Meeting Start** to start the meeting. Meeting date & Time are Automatically displayed on screen .Once the engineer does the **Meeting Start**, the Visit number will again go back in Green color & the app will not allow the sales engineer to proceed for another visit. During the meeting, the sales engineer can note down the customer's requirements in **Meeting Report** by clicking on that visit.

The Sales engineers need to fill up all the required information marked with (*) & also record their location by clicking on **Tag My Meeting Location**. After clicking on Tag Location, the app will fetch location from the Google Map. The arrows located in the middle will help engineers to surf through the Previous & Next pages. And the outer arrows will help engineers to directly go the first & last pages.

If there are multiple contact persons then sales engineers can generate a new field by clicking on (+) button below

Then the engineers can capture the existing fleet list of the prospect if the similar machine is available to the customer. Then sales engineers need to select the **Equipment Category** from the drop down. If the customer has some existing fleets then that can be added one by one. By clicking on (+) button, a new field will appear.

Now the visit number will be shown in **complete** status under My Jobs. As soon as visit completed, the Enquiry ('s) will be created automatically as per requirement captured in the **Meeting Report** and will be assigned to same engineer.

Once visit is completed, the information will get synced in the server & the new Enquiries will be shown in **Assigned** status starting with **SA**. These sales enquiries now at first will be qualified by the dealer coordinator and then dealer coordinator will submit the enquiry for approval to PT sales engineer.

PT sales engineer will then review and approve the enquiry. Once the enquiry is approved by the PT sales team, the status in app changes to **Approved by OEM Engineer**. Then dealer sales engineer can update the status from his mobile app.

Now in WEB login, the Sales Manager needs to review the enquiry. If all the details are correct and it's a valid enquiry then they submit the enquiry for approval to PT sales manager. Sales Coordinator/Managers can do web login via their credentials.

The site URL is <https://in.acptsmervice.com/>

After the **Billing Done/Order Lost**, the completed enquiry cannot be seen in My Jobs of Sales Engineer's mobile app.

Please Note: Order Lost option will be available before **DO Received** in Sales Coordinator login. (Please see the app flow given in page no.02 for reference)

Direct Enquiry Logging by Sales Engineer from Power hub app:

The Sales/SE Engineer can directly log an enquiry from **Enquiry Logging** option given in the mobile app for an Existing customer

The sales engineer has to fill up an **Enquiry Logging** form similar to the **Meeting Report**. After tagging the location in the 1st page of that form, engineer has to search & select the customer. Engineer can search the customer by typing the customer name or the customer id in the **Prospect Name** field & relevant customer names will appear in drop down. Then the engineer needs to select the customer name from the drop down.
